

Ookla once again confirms that Swisscom has the best network in Switzerland

Swisscom has triumphed in the Ookla Speedtest Awards for the sixth time, coming top in the categories ‘best mobile coverage’ and ‘fastest mobile phone network’. A Speed Score of 67.25 Mbit/s means that Swisscom customers enjoy the fastest network speeds with the best coverage.

Ookla analysed the results of tests taken with Speedtest across Swiss mobile phone networks in the period from July to December 2020. Customers can use the Speedtest app from Ookla to measure the speed of the mobile network. Over half a million measurements show that Swisscom has the fastest mobile network and the best mobile coverage. Christoph Aeschlimann, Swisscom CIO&CTO, is delighted: “This is the result of our ongoing network expansion, as that’s what enables us actually to provide our customers with the high speeds and so prepare them for the opportunities of the networked world.” Swisscom achieves average top speeds of 79.81 Mbit/s when downloading and 22.28 Mbit/s when uploading. Doug Suttles, CEO and co-founder of Ookla, said: “Swisscom’s high-speed network ensures its customers experience the highest quality of service. Speedtest Awards are an elite designation reserved for the best fixed and mobile internet providers around the world.”

Significant investments in 5G and 4G expansion

Swisscom is constantly driving the expansion of the mobile phone network to meet the rising demand for data. Swisscom already provides the latest 5G mobile generation to 96% of the population. The faster version 5G+, with all the advantages of 5G, is available at over 500 locations and is being expanded further.
